

PRO TIP

Ask ChatGPT:

"Does this design make sense
as a [tumbler wrap / sticker / wall art] ?"

It'll tell you if it translates
or if you need to adjust.

LAYER 2

Expand Niches

Same vibe, different identity

Hunting Dad selling? Try:

- Hunting Mom
- Hunting Couple
- Bowhunter
- Fishing Dad
- Daughter of a Hunter

Same design energy.
Different buyer identity.

PRO TIP

Ask ChatGPT:

"What are 10 other niches
this design would also work for?"

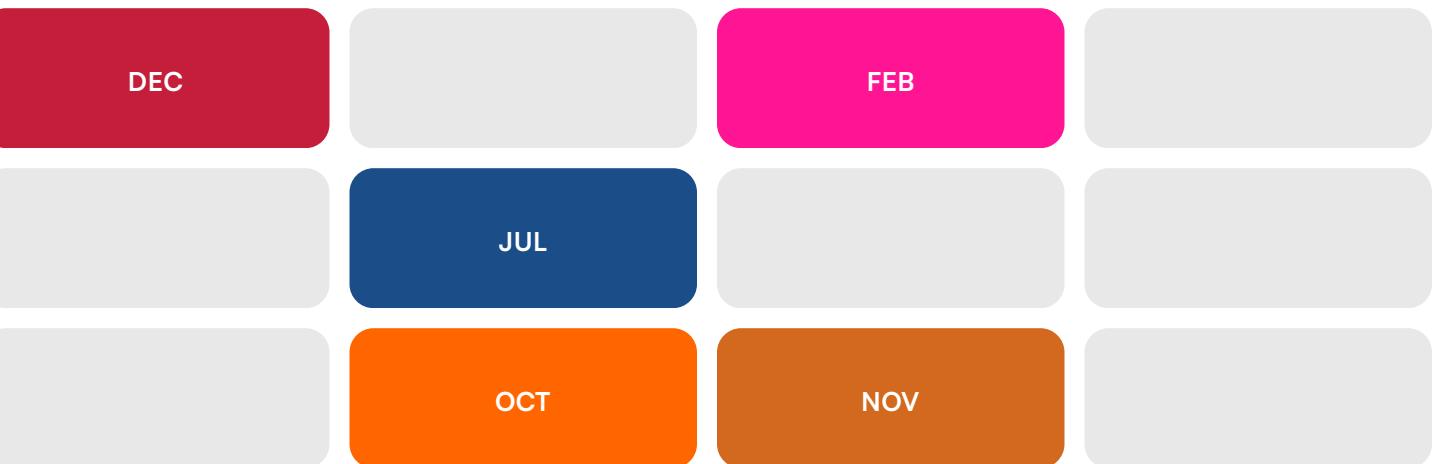

Let AI do the brainstorming.
You just create.

LAYER 3

Expand Seasons

Base design selling? Create:

-  Christmas version
-  Valentine's version
-  Patriotic version
-  Halloween version
-  Fall version

One design can become
a 12-month seller.

 HOW I DO IT

"Take the base design and create prompts for:
**Christmas, Valentine's Day, Patriotic,
Halloween, and Fall versions.**"

ChatGPT does the seasonal translation.
You just generate and list.

Create Bundles

You've already created the singles.

Now package them:

-  4-pack niche bundles
-  Seasonal megabundles
-  "Complete Collection" bundles

4

BUNDLE

Same work.

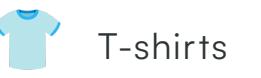

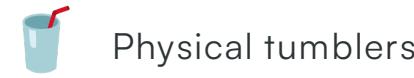

Higher price point.

Higher perceived value.

LAYER 5

Print-On-Demand

Have a POD shop? Repurpose your winners:

DIGITAL
\$\$

PHYSICAL
\$\$

Digital + Physical =
double monetization.

Same design. Two income streams.

Let's do the math:

1 winning PNG

→ 3 other formats = **4 products**

→ 5 niche variations = **20 products**

→ 4 seasonal versions = **80 products**

→ Bundled versions = **100+ products**

From ONE design.

Let me make this **real** for you.

Say one PNG becomes 20 total products
across formats and niches.

Even if each one only sells 15 copies at \$4...

20 × 15 × \$4 =

\$1,200

From ONE original idea.

And some of those will sell **way more** than 15 times.

 WRITE THIS DOWN

“

Don't chase 1,000 random listings.

Build and scale 10 winners.

”

One great design can quietly power
an entire month of Etsy revenue.
